

a) S2 (3.3 deg beyond the terminator, shadow edge 2.9 km):
sunlit ejecta mass, rule 'vertical equivalent' (the other rule: cannot determine)

b) Plume signal-to-noise against the total background
(solid: subtraction systematic 1e-3; dotted: 1e-2)

c) LCROSS like-for-like check (observed 2240 +/- 400 kg, Strycker et al. 2013): a calibration of the bulk density, not a validation
