

a) Visual-threshold model, S1 at Istanbul (Moon 53 deg, 39 % lit);
bands: field factor 1.4-24; conditional on a clear, unobstructed, attentive view

b) Phone video limits (SNR 8 after the declared processing penalty), broad band:
not V magnitudes; not comparable with panel a without colour terms

MODEL / HYPOTHETICAL SCENARIO - visual thresholds are exploratory, not calibrated for lunar flashes
