

a) Model light curves, $\eta_{\text{vis}} = 1e-4$
(solid: 2500 K, τ 0.2 s; dashed: 2500 K, 0.8 s; dotted: 3500 K, 0.4 s)

b) Dilution of the flash in longer exposures

c) Above-atmosphere limits vs exposure (illum 0.35, 8' from sunlit terrain, dark sky, airmass 1.2 at 2500 m)
