

Flash brightness sensitivity, ballistic case ($E_k = 2.82 \times 10^9$ J: 2.0 t at 1.68 km/s), cooling blackbody, $\tau = 0.5$ s, isotropic. Laboratory-trend extrapolation (Swift et al. 2011): $\eta \sim 7 \times 10^{-17}$, far left of the axis.

Rc peak magnitude

Ic peak magnitude

J peak magnitude

Ks peak magnitude

MODEL / HYPOTHETICAL SCENARIO - no calibrated visible efficiency transferable to this regime was established in our source review
