

a) S2 (2.9-km shadow edge): sunlit visible mass, in-domain ejecta from 92 m/s, rule 'vertical equivalent'

b) Exposure-integrated SNR, regolith grains, p Phi 0.03 (solid: subtraction systematic 1e-3; dotted: 1e-2); dash-dot: fine-rich grains

c) LCROSS like-for-like check (observed 2240 +/- 400 kg, Strycker et al. 2013): a calibration of the bulk density, not a validation

MODEL / HYPOTHETICAL SCENARIO - within the HH2011 scaling domain only
